

## **Building on Vocabularies: Transforming Museum Collection Information as Linked Data**

Brenda Podemski

Technical Lead for Collection Information Management, J. Paul Getty Museum

The Getty Vocabularies have long served as a way for cultural heritage institutions to employ standardized authorities for describing the objects in their collections. As the Linked Open Data community grows, use of standard vocabularies such as these becomes increasingly important as these associations will permit us to find conceptual common ground through shared linked terminology. This presentation will provide an overview of a current campaign to transform Getty Museum Collection datasets for publication as Linked Open Data, with particular concentration on the process of reconciling these resources with the Getty vocabularies.
